TESTIMONIAL

James Geering

TESTIMONIAL.

Getting tested for PFAS at Quest Diagnostics was easier than I expected. The process was straightforward, and when I saw my results, it really hit home how exposed we are as firefighters.

Knowing my PFAS levels has given me a better sense of awareness, and I strongly encourage other firefighters to get tested.

Firefighter & Host and CEO at Behind the Shield Podcast

THE DECISION.

I spent 14 years working for fire departments on both the East and West Coasts of America. As someone who takes my job very seriously, I frequently undergo fitness training in my bunker gear in addition to structure fires and operational training. I also used firefighting foam throughout my entire career.

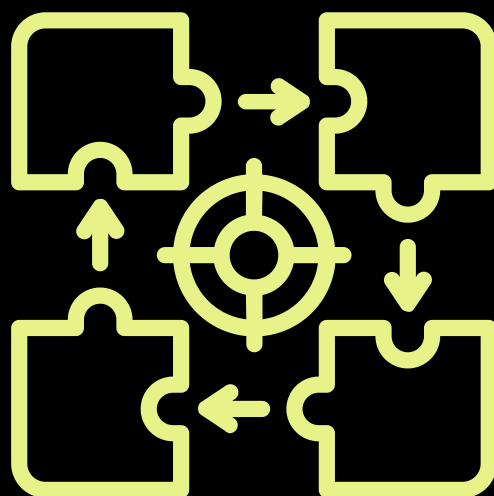

Thanks to Diane Cotter, **it was only recently revealed that both our bunker gear and foam contained PFAS.** Cancer is an epidemic in my profession, and this exposure just added to the risks.

THE PROCESS.

My experience with the testing process was very easy. I took the Quest Diagnostics PFAS Blood test panel. The staff at Quest Diagnostics was fantastic.

I felt absolutely supported throughout the process. The results came within a few days and were easy to read.

THE REACTION.

The results were terrifying, as these carcinogens don't appear on any of the other blood panels I do frequently. It angers me that we are exposed to this level without knowing it.

I work very hard to maximise my sleep, nutrition, and exercise yet, still suffer from brain fog. I'm wondering if this might be the missing piece.

THE ADVICE.

Doing the test made me even more aware of every other contaminant whether minimising Teflon pan usage or avoiding packaging.

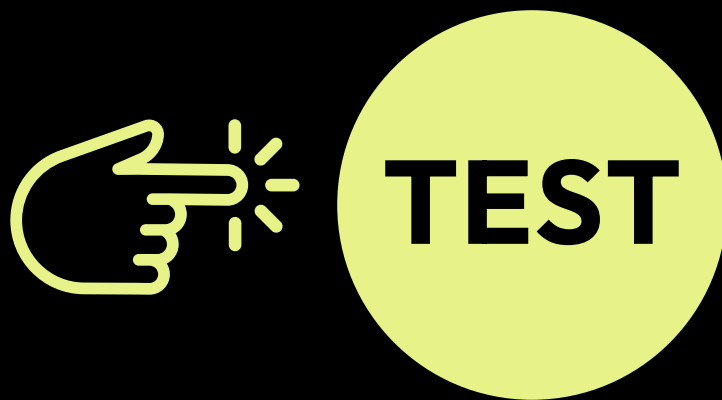

Every single firefighter needs to get this test!! Having seen the levels in my drinking water, that extends to every other citizen too.
